Lab 1: Requirement Description

- 1-1: MPLAB X IDE 的下載及安裝
 - Link: https://www.youtube.com/watch?v=giAbtZTvUFU
- 1-2: Introduction to Instruction Set
 - Link: https://www.youtube.com/watch?v=qzUGJSno5Nk
- 1-3 : Lab requirements:
 - 基本題 (70%):
 - 題目敘述:利用 DECFSZ 指令做一個迴圈,從 15+14+...+1,
 最後將值存回 WREG。
 - o 評分標準:會檢查是否使用 DECFSZ 指令以及利用迴圈逐步把值加上去,最後存回 WREG 的值是 15+14+...+1 的和,而非 15。

● 進階題 (30%):

- 題目 叙述: 利用 BTFSS 指令做一個迴圈·從 1+2+4+8+16+32+64、最後將值存回 WREG。
- o 評分標準:會檢查是否使用 BTFSS 指令以及利用迴圈逐步把值加上去,最後存回 WREG 的值是 1+2+4+8+16+32+64 的和。

● 加分題 (20%):

- 題目敘述:在 data memory 位置 0x001 以及 0x002 放入 16 位元的數,使用迴圈判斷其 bit pattern 是否符合 palindrome 的條件,若符合,將 data memory 位置 0x003 的值設為 0xFF,否則,將 memory 位置 0x003 的值設為 0x01。
- o 評分標準:
 - 1. 同學需在影片中呈現兩個數值以及其判斷的結果,分別是 0xD99B 以及 0xCFFB,如以下圖一與圖二。
 - 2. 會檢查是否使用迴圈。
- o 提示:同學可以利用 RLNCF、RRNCF 的指令以及<mark>邏輯運算</mark>去完成加分題。

Address	00	01	02	03	Addr
000	00	D9	9B	FF	000

Address	00	01	02	03
000	00	CF	FB	01

Lab 1: Requirement Description

- 1-1: MPLAB X IDE Download and Install
 - Link: https://www.youtube.com/watch?v=giAbtZTvUFU
- 1-2: Introduction to Instruction Set
 - Link: https://www.youtube.com/watch?v=qzUGJSno5Nk
- 1-3: Lab requirements:
 - Basic (70%):
 - Description: Form a loop by using DECFSZ instruction to calculate 15+14+...+1 and put the result in WREG.
 - Standard of grading: We will check whether you use DECFSZ instruction to form a loop to get the answer. The result put in WREG is the value of 15+14+...+1, not 15.
 - Advanced (30%):
 - Description: Form a loop by using BTFSS instruction to calculate 1+2+4+8+16+32+64 and put the result in WREG.
 - Standard of grading: We will check whether you use BTFSS instruction to form a loop to get the answer. The result put in WREG is the value of 1+2+4+8+16+32+64.
 - Bonus (20%):
 - Description: Put 16 bits value in address 0x001 and 0x002 of data memory. Use loop to determine whether its bit pattern is palindrome. If true, put value 0xFF to address 0x003 of data memory, else, put value 0x01 to address 0x003 of data memory.
 - Standard of grading:
 - 1. You need to show two inputs and results in your video. One is 0xD99B, the other is 0xCFFB. See figures below.
 - 2. You must use loop.
 - Hint: You can use RLNCF RRNCF instructions and logic operation to complete Bonus.
